# Large Capacity Mixer 100-2000rpm, 120V

[Click to open expanded view](#)

<b>Shaking Action</b>	orbital vertical or horizontal
<b>Capacity</b>	tube racks
<b>Volts</b>	120

Glas-Col's Large Capacity Mixer is an ideal choice for labs requiring versatility. Whether you require gentle, orbital-type shaking or more vigorous vortexing of samples, this mixer fulfills those needs effectively. It accommodates a wide variety of vessels that can be quickly interchanged. Additionally, custom cartridges designed for specific applications are available, constructed from chemical-resistant foam and ABS plastic.

### Features:

- At the low end of the 100-2,000 rpm speed range, the sample is mixed with a gentle, orbital motion. The high end of the range will mix the sample

with a vigorous vortexing action.

- The pulsing feature can be used to interrupt the mixing process, to join upper and lower strata, for more thorough mixing.
- DC motor, with filtered control, allows the Large Capacity Mixer to run smoothly and quietly, and prolongs the operating life of the unit.
