

Holms Pick-Up Sweeper 300

Big, clever and flexible

Holms 300 is our largest pick-up sweeper for larger compact loaders, tractors and medium-sized wheel-loaders. A full-sized attachment for professional sweeping. The unique Holms balance system eliminates the need for support wheels. Higher speeds, better ground contact and an optimum constant ground pressure have made Holms 300 one of the market's most cost-effective sweeping attachments. The basic version is supplied complete with a water tank and sprinkler system, electrical wiring for operating the side brush and sprinkler from the cab, hydraulic hoses with quick couplings, height and tilt indicators and hooks (for the most common types of carrier). The brush roller is driven by two direct-acting hydraulic motors located inside the brush drum.

The hooks are bolted to the attachment for easy hook replacement. Side brushes are available for mounting on the right or left, or both sides. Holms 300 is available in three different widths and with two types of motor. To determine the most suitable option, check the carrier's hydraulic flow and wheel width, together with the size of the area to be cleaned.

Gutter brush is optional.

Holms 300	2.2	2.5	3.0		2.2	2.5	3.0
Working width (ft)	7.2	8.2	9.8	Effective waste volume (cu.ft)	12.7	23.3	24.7
Max. width (ft)	7.9	8.8	10.5	Weight empty, excl. hooks (lb)	1036	1257	1433
Max. height excl. hooks (ft)	4.3	4.3	4.3	Weight, full tank and container, without gutter brush (lb)	3075	4266	4531
Brush diameter (inch)	28	28	28	Oil flow, 2,000 motor, min/max (gpm)	10/34	10/34	—
Water tank, volume (gall)	106	106	106	Oil flow, 4,000 motor, min/max (gpm)	—	18/56	18/56

All weights are approximate. Attachment weight excludes hooks.
