<b>Complaint:</b> No start
<b>Cause:</b>
<b>Correction:</b> Went to location. Was informed that lift ran out of propane. Fresh tank installed on lift. Felt tank, full. Checked tank connection to see if old tank washer stayed in fitting, good. Found vacuum line from lock off to mixer cracked. Cut cracks out and reattached. Checked for fuel going to mixer, none. Towed lift out of ampitheater. 114.
Unit was delivered to shop.
Began by turning off and removing tank and allowed to settle. Purged fuel from fuel line. Reinstalled tank. Repressurized fuel system. Pulled plug wires and checked ignition system spark quality. Reinstalled wires and tried to crank lift. Starts and runs as it should. 114.
<b>Complaint:</b> Park brake inop

<b>Complaint:</b> Add-on: Park brake does nothing.
<b>Cause:</b> Cables were disconnected and linkage in a bind.
<b>Correction:</b> I reconnected them and they acted locked up. I took apart the brakes to remove the cable and found the linkage in a bind. Evidently the cables were removed to get the forklift free to move. I corrected the linkage issue, reassembled the brakes and adjusted the park brake. The adjuster was locked in position with a set screw. I removed the set screw to allow the operator to adjust the park brake as needed. Hopefully being able to adjust the brake will keep them from being disconnected in the future. There are instructions posted next to the park brake on how to adjust them.
